I understand that this amount is in addition to my monthly energy bill.

Renewable Energy from
Your Touchstone Energy Cooperative

Renewable Energy from
Your Touchstone Energy Cooperative

* One block of 100 kWh represents about 10% of the average residential monthly electric usage (1,000 kWh).

- Please provide me with more information.
- specify the number of blocks in the space provided.)
- blocks. (If more than 5 blocks at \$1.50 per block are desired,
- 5 blocks (500 kWh).....\$7.50
 - 4 blocks (400 kWh).....\$6.00
 - 3 blocks (300 kWh).....\$4.50
 - 2 blocks (200 kWh).....\$3.00
 - 1 block (100 kWh).....\$1.50

Number of blocks* Amount added to my monthly energy bill:

Yes! I want to participate in the Evergreen renewable energy program.

Please sign me up at the following level:

Be the change you wish to see in the world.

For as little as \$1.50 per month, you can do more to support renewable energy and protect the environment.

Now you can support renewable energy without owning your own wind turbine.

Evergreen is a voluntary renewable energy "green power" program available to your home, farm or business through your local Touchstone Energy Cooperative. In addition to your normal electric bill, you volunteer to pay a small, additional charge each month to offset the additional cost of renewable energy generation.

Winnebago Wind Power

is the latest addition to our renewable resource portfolio that provides power for *Evergreen*. Dairyland Power Cooperative (DPC), our wholesale power supplier, purchases 20 megawatts (MW) of clean electricity from ten Gamesa wind turbines located near Thompson, Iowa. Winnebago Wind Power provides enough energy to power nearly 6,000 homes.

Wind Turbine Fun Facts:

- Each turbine is approximately 260 feet from the ground to its hub – nearly the length of a football field.
- Each blade is about 130 feet long and weighs 15,000 pounds.
- Blade tip speed can be up to 175 mph.
- Minimum wind speed for operation is 9 mph. Maximum wind speed is 56 mph.
- Each turbine base contains about 450 cubic yards of concrete (45 cement trucks).
- Each turbine has the same environmental benefit (CO2 reduction per year) as removing 800 cars from the road or not consuming 10,000 barrels of oil.

Evergreen renewable energy comes from the wind and waste-to-energy sources such as landfill gas and livestock methane. Your participation in *Evergreen* supports Dairyland Power Cooperative in its efforts to increase its total renewable generation above and beyond any state requirements. To learn more go to www.dairynet.com.

DPC Renewable Energy

(In Thousands of MWh Annually)
