CONTROLLED WATER HEATER

Availability

Available under established rules and regulations for service to water heaters of Cooperative members subject to the following criteria:

Criteria:

- (a) The electric water heater shall be of at least 40-gallon capacity.
- (b) Usage pattern must be such that the load can be interrupted a minimum of 4 consecutive hours.
- (c) Cooperative personnel will be given access to the load management equipment for maintenance and inspection purposes.
- (d) Monthly credit will be paid when energy usage is 270 kwh or higher.
- (e) Necessary load management equipment will be installed and maintained by a representative of the Cooperative.
- (f) The electric water heater must be the primary source of hot water on existing installations.
- (g) The electric water heater must be the sole source of hot water on any new installation.
